I.	ASBESTOS AND LEAD-BASED PAINT INSPECTION REPORT

ASBESTOS AND LEAD-BASED PAINT INSPECTION REPORT

FACILITY:LEUZINGER HIGH SCHOOL

4118 W. Rosecrans Avenue Lawndale. California 90260

INSPECTION DATE: March 30 thru April 27, 2010

INTRODUCTION

The **CENTINELA VALLEY UNION SCHOOL DISTRICT** retained **ENCORP** to conduct an asbestos and lead-based paint inspection at **LEUZINGER HIGH SCHOOL** campus. The purpose of this inspection was to identify suspect Asbestos Containing Materials (ACM's) and Lead-Based Painted Materials (LBPM's) that may be impacted in the upcoming modernization project at the site. The inspection results that follow summarize the components tested, results, and recommendations anticipating impact during improvements Project.

ENCORP's Certified Site Surveillance Technicians and DHS Certified Lead Inspector/Assessors completed the site inspections. Prior to sample collection, ENCORP's representatives conducted a visual investigation of the property to identify and quantify all suspect asbestos containing, and lead painted building materials. Upon completion of the visual investigation, building materials were grouped into homogeneous categories and samples were collected from the suspect asbestos containing materials previously identified. XRF testing of suspect LBPM's was also conducted.

SAMPLING METHODOLOGY -- ASBESTOS

ENCORP used a modified random sampling protocol to collect the samples of the suspect asbestos containing materials. Each of the suspect samples collected for this report were given a unique sample identification number and sealed inside leak proof containers for shipment to the laboratory for analysis.

All of the bulk samples collected by **ENCORP** during this inspection were analyzed by **ENCORP's Environmental Laboratory**, La Mirada, California. **ENCORP Environmental Laboratory** is accredited by NIST/NVLAP for analysis of asbestos fibers in bulk. A copy of the certification is included in the certification section of this report. These samples were analyzed by Polarized Light Microscopy/Dispersion Staining (EPA/600/R-93/116). This method is designed as an inexpensive screening method to examine bulk samples; it is not an absolute method. Any visible light method (including PLM) is limited by the resolution possible with visible light.

Because fibers with a diameter less than one micron will not be seen using PLM, a possibility exists that the asbestos content of materials with low asbestos percentages (such as floor tiles and soils) could actually be higher when analyzed by TEM, SEM, or X-ray diffraction.

The following contains the summary of the suspect asbestos containing materials sampled during this inspection, including the locations and laboratory analysis. Samples collected and found not to contain asbestos are classified as being None Detected "ND". The complete sampling results can be found in the attachment section of this report.

INSPECTION RESULTS (Continued)

Note: The listed quantities are for budgetary information and are not to be used for bidding purposes. The contractor has the sole responsibility for confirming the location, quantity and degree of difficulty in impacting the identified materials.

The following contains the summary of the suspect asbestos containing materials sampled during this inspection, including the location and laboratory analysis. Samples collected and found not to contain asbestos are classified as being None Detected "ND".

	SUMMARY OF SUSPECT MATERIALS TESTED				
Building #1					
Building Component	Location Of Material	Condition	Estimated Quantity	% and type of Asbestos	
Exterior Concrete Walls	Exterior/interior	G	-	Non-ACM	
Plaster walls/ceilings	Interior	G	-	ND	
12 x 12 ceiling tiles and associated mastic	Interior (classrooms/hallway) above T-bar	G	-	ND/ND	
2 x4 Ceiling panels	Interior	G	-	ND	
Roofing Material	Roof	G	-	ND	
Penetration mastic	Roof	G	500 sq ft	4% Chrysotile	
Flashing mastic	Roof	G	2,500 sq ft	6% Chrysotile	
Stucco	Exterior – Elevator Shaft	G	-	Stucco = ND Plaster = ND	
Window putty	Exterior	D	2,000 sq ft	2% Chrysotile	
12" Multiple speckled floor tile	Room 119, R115, Restroom	G	-	ND/ND	
Grey vinyl basecove and mastic	Room R115, staircases	G	500 In ft	Basecove = ND Mastic = 4% Chrysotile	
Mirror mastic	Basement – Girls dressing room	G	200 sq ft	10% Chrysotile	
9" Floor tile and mastic white with multiple speckled	1 st and 2 nd floor hallway	G	-	ND/ND	
Staircase rubber – grey slip protection flooring	Staircases	G	1,000 sq ft	Grey rubber = ND Mastic = 4% Chrysotile	
12" Tan with speckle floor tile and mastic	Room 210, 120	G	-	ND/ND	
Black vinyl basecove and mastic	Room 210	G	-	ND/ND	
Wall tile – straight hole and mastic	Room 207	G	-	ND/ND	
Vapor barrier	Media room				
(suspected below wood flooring)	(in accessible without removal)	G	4,500 sq ft	Assumed Material until demolition or removal	
4" brown basecove and mastic	Roof access room – 2 nd floor, 117, 116A, 114, 112, 111, 110A, 109, 106	G	-	ND/ND	
Carpet glue	Roof access room – 2 nd floor, 117, 116A, 114, 112, 111, 108, 109, 106	G	-	ND	
Vibration damper	2 nd floor, roof access mechanical room	G	100 sq ft	20% Chrysotile	

	SUMMARY OF SUSPECT MATERIALS TESTED						
	Building #1						
Building Component	Location Of Material	Condition	Estimated Quantity	% and type of Asbestos			
9" brown floor tile and mastic	Throughout rooms in the 2 nd and 1 st floors, including carpeted areas, workrooms, hopper rooms, auditorium, restrooms, green rooms, book storage	D	40,000 sq ft	Tile = 6% Chrysotile Mastic = 10% Chrysotile			
9" red floor tile and mastic	Room 200	D	100 sq ft	Tile = 6% Chrysotile Mastic = 10% Chrysotile			
9" mint green floor tile and mastic	1 st & 2 nd floor hallways	D	5,000 sq ft	Tile = 6% Chrysotile Mastic = 10% Chrysotile			
Fire curtain	Auditorium	G	-	ND			
Chalkboard mastic (Assumed)	Classrooms, Rooms	G	-	Assumed Material until demolition or removal			
12" tan floor tile and mastic	Room 114 (2000 sq ft below carpet)	G	-	ND/ND			
Duct work seam tape	Classroom heater rooms	G	-	ND			
TSI pipe insulation	Classroom Heater rooms, Rm 114, 3 rd floor HVAC, Heater, Boiler Room, Mechanical room Crawlspace-(Contaminated)	SD – Boiler Room SD – Crawl- space	2000 In ft	12% Chrysotile 8% Amosite			
TSI pipe elbows	Classroom Heater rooms, Rm 114, 3 rd floor HVAC, Heater, Boiler Room, Mechanical room Crawlspace-(Contaminated))	SD - Boiler Room SD - Crawl- space	500 ea	12% Chrysotile 8% Amosite			
Brown Counter tops - Chemical tops	Rooms 102, 100	D	800 sq ft	20% Chrysotile			
Black Sinks – Transite	Room 102, 100	G	15 ea	30% Chrysotile			
12" beige floor tile and mastic	Campus security, room 111, 118	G	-	ND/ND			
Drywall and mud (JC=Joint Compound),/tape	Ceiling above drop ceilings	SD	62,000 sq ft	Drywall = ND JC = 2% Chrysotile Tape = ND			

SUMMARY OF SUSPECT MATERIALS TESTED						
Building #2						
Building Component	Location Of Material	Condition	Estimated Quantity	% and type of Asbestos		
Concrete Walls	Exterior	G	-	Non-ACM		
Exterior Stucco Walls	Exterior	G	-	ND		
12 x 12 (Random/straight) Ceiling tiles and mastic	Interior classrooms	G	-	ND/ND		
Drywall ceiling/walls & JC	Interior classrooms, Sewing room - above T-bar	G	-	ND/ND		
Plaster ceilings/walls	Interior classrooms/restrooms/ mechanical rooms	G	-	ND		
Attic insulation	Attic	G	-	ND		
TSI Fiberglass pipe insulation	Attic	G	-	Non-ACM		
Aircell insulation – pipe wrap	Attic - Contamination	SD	200 In ft	30% Chrysotile		
TSI Pipe Elbows	Attic - Contamination	SD	100 ea	20% Amosite 10% Chrysotile 5% Crocidolite		
12 x 12 Fissured Ceiling Tiles and associated mastic	Home ed	G	-	ND/ND		
12 x 12 (Random/straight) Ceiling tiles and mastic	Sewing room - above T-bar	G	-	ND/ND		
2 x 4 fissured ceiling panels	Sewing room	G	-	ND		
Roofing	Roof	G	-	ND		
Penetration mastic	Roof	G	-	ND		
Transite flue pipes	Roof	G	4 ea – 20 In ft ea	30% Chrysotile 5% Amosite		
HVAC duct seam tape	Roof	G	-	ND		
Window putty	Exterior windows	D	500 sq ft	2% Chrysotile		
9" floor tile and mastic	Rooms 2-1 to 2-4, workrooms	D	8,000 sq ft	Tile = 6% Chrysotile Mastic = 10% Chrysotile		
Transite black hood/ counters	Rooms 2-1 & 2-2	G	500 sq ft	30% Chrysotile		
Under sink mastic	2-3, 2-4	G	-	ND		
12" brown floor tile and mastic	Rooms 2-1 to 2-4	D	500 sq ft	Tile = ND Mastic = 10% Chrysotile		
Carpet glue	2-3, 2-4 sewing room	D	-	ND		
Vinyl flooring & mastic below sinks	Rooms 2-3, 3-4 – below sinks	D	-	ND/ND		

SUMMARY OF SUSPECT MATERIALS TESTED				
	Build	ling #3		
Building Component	Location Of Material	Condition	Estimated Quantity	% and type of Asbestos
Exterior Concrete Walls	Exterior	G	-	Non-ACM

	Building # Home Bleachers Field Restroom				
Building Location Of Material Condition Estimated Quantity % and type of Asbestos					
Window putty	Exterior	G	40 In ft	2% Chrysotile	
Roofing material	Roof	G	200 sq ft	2% Chrysotile	
Penetration mastic Roof G 10 sq ft 4% Chrysotile					
Flashing Mastic	Roof	G	150 sq ft	15% Chrysotile	

Note: Conditions of materials are identified as follows: Good (G), Damaged (D), or Significantly Damaged (SD). The quantities listed are for budgetary purposes only. Contractors completing proposals for the removal of asbestos containing materials are responsible for verifying the location, quantity, degree of difficulty and necessity for removing the identified materials.

SUMMARY OF SUSPECT MATERIALS TESTED							
Building # Visitor Field Restroom ¹							
Building Component Location Of Material Condition Estimated Quantity % and type of Asbestos							
Roofing core	Rood (Shingled)	G	-	ND			
Penetration mastic							

Note 1: Interior materials were inaccessible at the time of the inspections. Should disturbance of this material be necessary, the materials will need to be sampled to determine asbestos content prior to disturbance.

SUMMARY OF SUSPECT MATERIALS TESTED						
	Building # Anr	nouncers Boo	oth			
Building Location Of Material Condition Estimated Quantity % and type of Asbestos						
Drywall & Joint Compound	Booth	G	-	ND/ND		
4" Black basecove & Mastic	Booth	G	-	ND/ND		
12" beige floor tile and mastic	Booth	G	-	ND/ND		
Roofing material	Roof	G	-	ND		

Note: Conditions of materials are identified as follows: Good (G), Damaged (D), or Significantly Damaged (SD). The quantities listed are for budgetary purposes only. Contractors completing proposals for the removal of asbestos containing materials are responsible for verifying the location, quantity, degree of difficulty and necessity for removing the identified materials.

DISCUSSIONS AND RECOMMENDATIONS (ASBESTOS)

Asbestos containing materials (ACM) should be removed by a California trained and licensed abatement contractor in accordance with all governing regulations. **ENCORP** also recommends that a California Certified Asbestos Consultant/Site Surveillance Technician oversee the project to ensure that proper methods are being utilized.

In cases where the floor tile was found positive for asbestos content and the underlying mastic was found negative for asbestos, the materials (floor tile and mastic) shall be removed as asbestos containing. There is currently no feasible means of separating the floor tile from the underlying mastic without causing its disturbance.

Materials that are found to contain less than one (1) percent asbestos are considered asbestos containing construction materials (ACCM) by CAL/OSHA and are not regulated by the South Coast Air Quality Management District (SCAQMD). These materials are regulated through CAL/OSHA and should be removed by a California trained and licensed abatement contractor in accordance with all governing regulations. Waste generated from these materials is considered construction debris and is not regulated as hazardous or asbestos containing waste.

If Asbestos Containing Materials are to be impacted during this project **ENCORP** recommends that minor disturbance to ACM such as coring or drilling to be performed by a certified trained contractor with a minimum of 16-hour AHERA Operations and Maintenance Training – Class III asbestos work classification. This work classification is used as an adequate alternative for trade work involving electrical, lighting, plumbing, and miscellaneous disturbances were work is not to exceed three (3) square feet (sq ft) per area and a one hundred (100) square feet (sq ft) total combined square footage. **ENCORP** also recommends that a California Certified Asbestos Consultant/Site Surveillance Technician oversee the project to ensure that proper methods are being utilized.

INSPECTION RESULTS -- LEAD

The SCITEC MAP4 XRF Spectrum Analyzer was utilized for the analysis of suspect lead-based painted materials. In this method of analysis, the material is exposed to X-Rays or other high-energy radiation (such as gamma rays), which causes lead to emit X-Rays with a characteristic frequency. The intensity of this radiation is measured by the instrument's detector and is then converted into a number that represents the amount of lead in the material per unit area, usually milligrams per square centimeter (mg/cm²).

The HUD and OSHA have set a lead level of 1.0 mg/cm² as being a regulated lead-containing material. Los Angeles County Department of Health Services has set a lead level of 0.7 mg/cm² as being a regulated lead-containing material. Analytical sensitivity of the of the XRF measurement methodology reports positive lead-based content results at or above 0.7 mg/cm², presence of lead content result between 0.1 and 0.6 mg/cm², and negative results at less than 0.1 mg/cm². CAL/OSHA considers all lead surface levels to be of concerns.

Listed below is a summary of the materials sampled and found <u>positive for lead-Based Paint Content</u> at these buildings, along with the location and estimated quantity. A complete listing of all components tested and results can be found in Section IIb of this report.

SUMMARY OF LEAD-BASED CONTAINING COMPONENTS TESTED Building #1				
COMPONENT	LOCATION	Quantity	Results (mg/cm²)	
Brown metal door frame	Auditorium interior stage	1 ea	0.89	
Brown metal ladder	Auditorium interior stage	80 In ft	1.42	
Grey metal doors	Auditorium interior stage	2 ea	12.56	
Brown metal curtain frame	Auditorium interior stage	100 In ft	3.81

DISCUSSIONS AND RECOMMENDATIONS (LEAD)

All suspect lead-based painted components were tested utilizing SCITEC Corporation's MAP4 Spectrum Analyzer. The XRF data stored in the MAP4 unit was downloaded to ENCORP's Database.

All components with results of >0.7 mg/cm2 are considered lead-based painted according to the County of Los Angeles. All removal and disturbance (Stabilization and preparation for demolition) of lead-based materials shall be performed by a state-licensed contractor, using DHS-certified workers with at least one DHS-certified Supervisor. Where contractors performing renovation, repair and painting and are to disturb lead based paint the contractor shall be a Certified Renovator in accordance with 40 CFR Part 745.82 Lead: Renovation, Repair and Painting Program. All disturbance of lead-containing materials as defined in 8 CCR 1532.1, shall be performed by a state-licensed contractor, using lead-trained workers with certification of training meeting the requirements of 8 CCR 1532.1 and 40 CFR Part 745.82 Lead: Renovation, Repair and Painting Program. Abatement contractor's workforce shall be supervised by experienced persons trained, knowledgeable and qualified in the techniques of lead abatement, handling and disposal of lead-containing and/or lead-contaminated materials, and the subsequent cleaning of contaminated areas

CONCLUSION

ENCORP recommends that the above listed asbestos containing materials (ACM) which will be impacted by demolition activities, be removed by a California trained and licensed abatement contractor in accordance with all governing regulations. ENCORP also recommends that a California Certified Asbestos Consultant/Site Surveillance Technician oversee the project to ensure that proper methods are being utilized.

ENCORP recommends that a trained, licensed Lead Abatement Contractor perform any renovation/demolition or preparation for demolition activities, which will disturb the lead containing building materials. All disturbance of lead-containing materials as defined in 8 CCR 1532.1, should be performed by a state-licensed contractor, using lead-trained workers with certification of training meeting the requirements of 8 CCR 1532.1 and 40 CFR Part 745.82 Lead: Renovation, Repair and Painting Program.

Additional asbestos-containing and lead-based painted materials may be present at this site. **ENCORP's** asbestos and lead inspection scope of work was limited to areas of impact as provided in construction drawings from the District. Care should be taken when demolishing, drilling, or coring into materials that will open wall cavities or sealed ceiling areas. If any additional known, assumed, or suspected asbestos-containing materials or lead-based painted components are discovered during renovation, remodeling or demolition activities, contact the District's environmental consultant to determine the proper course of action.

Should you have any questions concerning this report, please contact me at (714) 523-9811. Thank you.

Respectfully submitted,

Reviewed,

Alexander E. Blankevoort.

NOTES: ND=None Detected Asbestos is not quantifiable below the method detection limit of one (1) percent. Amphibole asbestos includes amostic, crocidolite, anthophyllife, tremolite and actinolite. (FR) = Friable, (NE) = Son Friable. Condition of sample is as received by the laboratory. Our policy is to retain all samples for a period of thirty days. Accredited by the National Voluntary Laboratory Accreditation Program and Environmental Laboratory Certification for the specific scope of accreditation under NVLAP Lab Code 200878-0 and ELAP certificate no. 2379. Results reported pertain to sample(s) as submitted and does not necessarily apply to other apparently identical or similar materials.

This report is submitted for the exclusive use of the client to whom it is addressed. Any reproduction of this report or use of this Laboratory's name for adversing or publicity purposes without prior written authorization is prohibited. In addition, this report is not to be used to claim product endorsement by NVLAP, ELAP, or any agency of the U.S. Government. Where applicable, layers or "sub-samples" are reported and the Total Asbestos % represents the composite percentage of all sample layers.

-NOTES: ND=None Detected Asbestos is not quantifiable below the method detection limit of one (1) percent. Amphibote asbestos includes amosite, crocidolite, anthophyllite, tremolite and actinolite. (FR) = Friable, (NF) = Non-Friable. Condition of sample is as received by the laboratory. Our policy is to retain all samples for a period of thirty days. Accredited by the National Voluntary Laboratory Accreditation Program and Environmental Laboratory Certification for the specific scope of accreditation under NVLAP Lab Code 200878-0 and ELAP certificate no. 2379. Results reported pertain to sample(s) as submitted and does not necessarily apply to other apparently identical or similar materials.

This report is submitted for the exclusive use of the client to whom it is addressed. Any reproduction of this Laboratory's name for advertising or publicity purposes without prior written authorization is problibited. In addition, this report is not to be used to claim product endorsement by NVLAP, ELAP, or any agency of the U.S. Government. Where applicable, layers or "sub-samples" are reported and the Total Asbestos % represents the composite percentage of all sample layers.

NOTES: ND=None Detected Asbestos is not quantifiable below the method detection limit of one (1) percent. Amphibole asbestos includes amosite, crocidolite, anthophyllite, tremolite and actinolite. (FR) = Friable. (NF) = Non-Friable. Condition of sample is as received by the laboratory. Our policy is to retain all samples for a period of thirty days. Accredited by the National Voluntary Laboratory Accreditation Program and Environmental Laboratory Certification for the specific scope of accreditation under NVLAP Lab Code 200878-9 and ELAP certificate no. 2379. Results reported pertain to sample(s) as submitted and does not necessarily apply to other apparently identical or similar materials.

This report is submitted for the exclusive use of the client to whom it is addressed. Any reproduction of this Laboratory's name for advertising or publicity purposes without prior written authorization is prohibited. In addition, this report is not to be used to claim product endorsement by NVLAP, ELAP, or any agency of the U.S. Government. Where applicable, layers or "sub-samples" are reported and the Total Asbestos % represents the composite percentage of all sample tayers.

-NOTES: ND=None Detected Asbestos is not quantifiable below the method detection limit of one (1) percent. Amphibole asbestos includes amosite, crocidolite, anthophyllite, tremolite and actinolite. (FR) = Friable, (NF) = Non-Friable. Condition of sample is as received by the laboratory. Our policy is to retain all samples for a period of thirty days. Accredited by the National Voluntary Laboratory Accreditation Program and Environmental Laboratory Certification for the specific cope of accreditation under NVLAP Lab Code 200878-0 and ELAP certificate no. 2379. Results reported pertain to sample(s) as submitted and does not necessarily apply to other apparently identical or similar materials.

This report is submitted for the exclusive use of the client to whom it is addressed. Any reproduction of this report or use of this Laboratory's name for advertising or publicity purposes without prior written authorization is prohibited. In addition, this report is not to be used to claim product endorsement by NVLAP, ELAP, or any agency of the U.S. Government. Where applicable, layers or "sub-samples" are reported and the Total Asbestos % represents the composite percentage of all sample layers.

-NOTES: ND=None Detected Asbestos is not quantifiable below the method detection limit of one (1) percent. Amphibole asbestos includes amosite, crocidolite, anthophyllite, tremolite and actinolite. (RR) = Friable, (NF) = Non-Friable. Condition of sample is as received by the laboratory. Our policy is to retain all samples for a period of thirty days. Accredited by the National Voluntary Laboratory Accreditation Program and Environmental Laboratory Certification for specific scope of accreditation under NVLAP Lab Code 200878-0 and ELAP certificate no. 2379. Results reported pertain to sample(s) as submitted and does not necessarily apply to other apparently identical or similar materials.

This report is submitted for the exclusive use of the client to whom it is addressed. Any reproduction of this report or use of this Laboratory's name for advertising or publicity purposes without prior written authorization is prohibited. In addition, this report is not to be used to claim product endorsement by NVLAP, ELAP, or any agency of the U.S. Government. Where applicable, layers or "sub-samples" are reported and the Total Asbestos % represents the composite percentage of all sample layers.

NOTES: ND=None Detected Asbestos is not quantifiable below the method detection limit of one (1) percent. Amphibole asbestos includes amosite, crocidolite, anthophyllite, tremolite and actinolite. (FR) = Friable, (NF) = Non-Friable. Condition of sample is as received by the laboratory. Our policy is to retain all samples for a period of thirty days. Accredited by the National Voluntary Laboratory Accreditation Program and Environmental Laboratory Certification for the specific scope of accreditation under NVLAP Lab Code 200878-0 and ELAP certificate no. 2379. Results reported pertain to sample(s) as submitted and does not necessarily apply to other apparently identical or similar materials.

This report is submitted for the exclusive use of the client to whom it is addressed. Any reproduction of this Laboratory's name for advertising or publicity purposes without prior written authorization is prohibited. In addition, this report is not to be used to claim product endorsement by NVLAP, ELAP, or any agency of the U.S. Government. Where applicable, layers or "sub-samples" are reported and the Total Asbestos % represents the composite

Amphibole asbestos includes amosife, crocidolite, anthophyllite, tremolite and actinolite. (FR) = Friable, (NF) = Non-Friable.

Condition of sample is as received by the laboratory. Our policy is to retain all samples for a period of thirty days. Accredited by the National Voluntary Laboratory Accreditation Program and Environmental Laboratory Certification for the specific scope of accreditation under NVLAP Lab Code 200878-0 and ELAP certificate no. 2379. Results reported pertain to sample(s) as submitted and does not necessarity apply to other apparently identical or similar materials.

NOTES: ND=None Betected Asbestos is not quantifiable below the method detection limit of one (1) percent. Amphibole asbestos includes amosite, crecidolite, anthophylite, tremolite and actinolite. (FR) = Friable, (NF) = Non-Friable. Condition of sample is as received by the laboratory. Our policy is to retain all samples for a period of thirty days. Accredited by the National Voluntary Laboratory Accreditation Program and Environmental Laboratory Certification for the specific scope of accreditation under NVLAP Lab Code 200878-0 and ELAP certificate no. 2379. Results reported pertain to sample(s) as submitted and does not necessarily apply to other apparently identical or similar materials.

This report is submitted for the exclusive use of the client to whom it is addressed. Any reproduction of this Laboratory's name for advertising or publicity purposes without prior written authorization is prohibited. In addition, this report is not to be used to claim product endorsement by NVLAP, ELAP, or any agency of the U.S. Government. Where applicable, layers or "sub-samples" are reported and the Total Asbestos % represents the composite percentage of all sample layers.

-NOTES: ND=None Detected Asbestos is not quantifiable below the method detection limit of one (1) percent. Amphibole ashestos includes amosite, crecidolite, anthophyllite, tremolite and actinolite. (FR) = Friable, (NF) = Non-Friable. Condition of sample is as received by the laboratory. Our policy is to retain all samples for a period of thirty days. Accredited by the National Voluntary Laboratory Accreditation Program and Environmental Laboratory Certification for the specific scope of accreditation under NVLAP Lab Code 200878-0 and ELAP certificate no. 2379. Results reported pertain to sample(s) as submitted and does not necessarily apply to other apparently identical or similar materials.

This report is submitted for the exclusive use of the client to whom it is addressed. Any reproduction of this Laboratory's name for advertising or publicity purposes without prior written authorization is prohibited. In addition, this report is not to be used to claim product endorsement by NVLAP, ELAP, or any agency of the U.S. Covernment. Where applicable, layers or "sub-samples" are reported and the Total Asbestos % represents the composite percentage of all sample layers. ENCORP Environmental management and services

Non-Friable. Asbestos Type(%) Non Asbestos (%) 100% MATRIX ND NONE DETECTED 100% MATRIX ND NONE DETECTED Friable or (<u>X</u> FR PLASTER CEILING PLASTER CEILING Material Color WHITE WHITE SAMPLE DESCRIPTION Sample Location/Activity CYM RR CYM RR Field/Client ID Number Sample 265178 265177

APPROVED SIGNATURE:

NOTES: ND=None Detected Asbestos is not quantifiable below the method detection limit of one (1) percent. Amphibole asbestos includes amosite, crocidolite, anthophyllite, tremolite and actinolite. (FR) = Friable, (NF) = Non-Friable. Condition of sample is as received by the laboratory. Our policy is to retain all samples for a period of thirty days. Accredited by the National Voluntary Laboratory Accreditation Program and Environmental Laboratory Certification for the specific scope of accreditation under NVLAP Lab Code 200878-0 and ELAP certificate no. 2379. Results reported pertain to sample(s) as submitted and does not necessarily apply to other apparently identical or similar materials.

-NOTES: ND=None Detected Asbestos is not quantifiable below the method detection limit of one (1) percent. Amphibole asbestos includes amosite, crocidolite, anthophylite, tremolite and actinolite. (FR) = Friable, (NF) = Non-Friable. Conditions of sample is as received by the laboratory. Our policy is to retain all samples for a period of thirty days. Accredited by the National Voluntary Laboratory Accreditation Program and Environmental Laboratory Certification for the specific scope of accreditation under NVLAP Lab Code 200878-0 and ELAP certificate no. 2379. Results reported pertain to sample(s) as submitted and does not necessarily apply to other apparently identical or similar materials.

This report is submitted for the exclusive use of the client to whom it is addressed. Any reproduction of this Laboratory's name for advertising or publicity purposes without prior written authorization is prohibited. In addition, this report is not to be used to claim product endorsement by NVLAP, ELAP, or any agency of the U.S. Government. Where applicable, layers or "sub-samples" are reported and the Total Asbestos % represents the composite percentage of all somple layers.

NOTES: ND=None Detected Asbestos is not quantifiable below the method detection limit of one (1) percent. Amphibole asbestos includes amosite, erocidolite, anthophyllite, tremolite and actinolite. (FR) = Friable, (NF) = Non-Friable. Condition of sample is as received by the laboratory. Our policy is to retain all samples for a period of thirty days. Accredited by the National Yoluntary Laboratory Accreditation Program and Environmental Laboratory Certification for the specific scope of accreditation under NVLAP Lab Code 200878-0 and ELAP certificate no. 2379. Results reported pertain to sample(s) as submitted and does not necessarily apply to other apparently identical or similar materials.

This report is submitted for the exclusive use of the client to whom it is addressed. Any reproduction of this Laboratory's name for advertising or publicity purposes without prior written authorization is product endorsement by NVLAP, ELAP, or any agency of the U.S. Government. Where applicable, layers or "sub-samples" are reported and the Total Asbestos % represents the composite percentage of all sample layers.

NOTES: ND=None Detected Asbestos is not quantifiable below the method detection limit of one (1) percent. Amphibole asbestos includes amosite, crocidolite, anthophyllite, tremolite and actinolite. (FR) = Friable, (NF) = Non-Friable. Condition of sample is as received by the laboratory. Our policy is to retain all samples for a period of thirty days. Accredited by the National Voluntary Laboratory Accreditation Program and Environmental Laboratory Certification for the specific scope of accreditation under NVLAP Lab Code 200878-0 and ELAP certificate no. 2379. Results reported pertain to sample(s) as submitted and does not necessarily apply to other apparently identical or similar materials.

This report is submitted for the exclusive use of the client to whom it is addressed. Any reproduction of this report or use of this Laboratory's name for advertising or publicity purposes without prior written authorization is prohibited. In addition, this report is not to be used to claim product endorsement by NVLAP, ELAP, or any agency of the U.S. Government. Where applicable, layers or "sub-samples" are reported and the Total Asbestos % represents the composite percentage of all sample layers.
